

ABSTRACT

A chain or synchronous belt drive having at least one chain or synchronous belt wheel (3) is provided which is integrated into the drive, whereon the chain or synchronous belt (2) is guided. The chain or synchronous belt includes an over-jump protection element which overlaps, at least partially, the chain or synchronous belt (2) on an side opposite the wheel (3). The over-jump protection element (13) is arranged on a guiding or tensioning element (12).
